3 66 648 34 TYPE_A 4.1
4 94 632 34 TYPE_C 3.6
Merging train.csv and meal_info.csv dataset by using common key id:
We notice that meal_id column in train.csv is similar to meal_id in meal_info.csv dataset. Let us merge these two datasets, train.csv and meal_info.csv using common key meal_id and name the table as trainfinal.
In [108]:
trainfinal = pd.merge(train, meal_info, on="meal_id", how="outer")
Merging trainfinal.csv and fulfilment_center_info.csv dataset by using common key id:
We notice that center_id column in trainfinal.csv is similar to center_id in fulfilment_center_info.csv dataset. Let us merge these two datasets, trainfinal.csv and fulfilment_center_info.csv using common key center_id and store it back in trainfinal.Display the first five rows of trainfinal using head().
In [109]:
trainfinal = pd.merge(trainfinal,fulfilment_center_info, on="center_id", how="outer")
